

Web Design Principles

Chapter Two *Designing the Site*

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Objectives

In this chapter, you will learn to:

- Understand the Web design environment
- Design for multiple screen resolutions
- Craft the look and feel of the site
- Create a unified site design
- Design for the user
- Design for accessibility

Understanding the Web Design Environment

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Understanding the Web Design Environment

- External factors that affect Web design
- Many variables affect how Web pages appear
- New screen resolutions
- Wide-screen formats
- New devices
- Your designs must be portable and accessible

Understanding the Web Design Environment

- Code to standards
- Test for compatibility
- View in multiple browsers
- Test on available operating systems
- Test on different devices

Browser Compatibility Issues

- Designing for multiple browsers is a challenge
- Test your work in as many browsers as possible
- Test with both older browsers and new browsers
- Try to minimize differences across browsers
- Newer browsers have better adherence to Web standards

Browser Compatibility Issues

Follow these guidelines:

- Follow W3C standards
- Validate your code
- Know your audience
- Test your work in multiple browsers and devices

Connection Speed Differences

- Bandwidth has always been a challenge for Web designers
- Users do not like waiting for content
- In the US, broadband access has increased
- Broadband access is not universal around the world
- Plan your pages for a variety of connection speeds
- Test your pages at different connection speeds

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

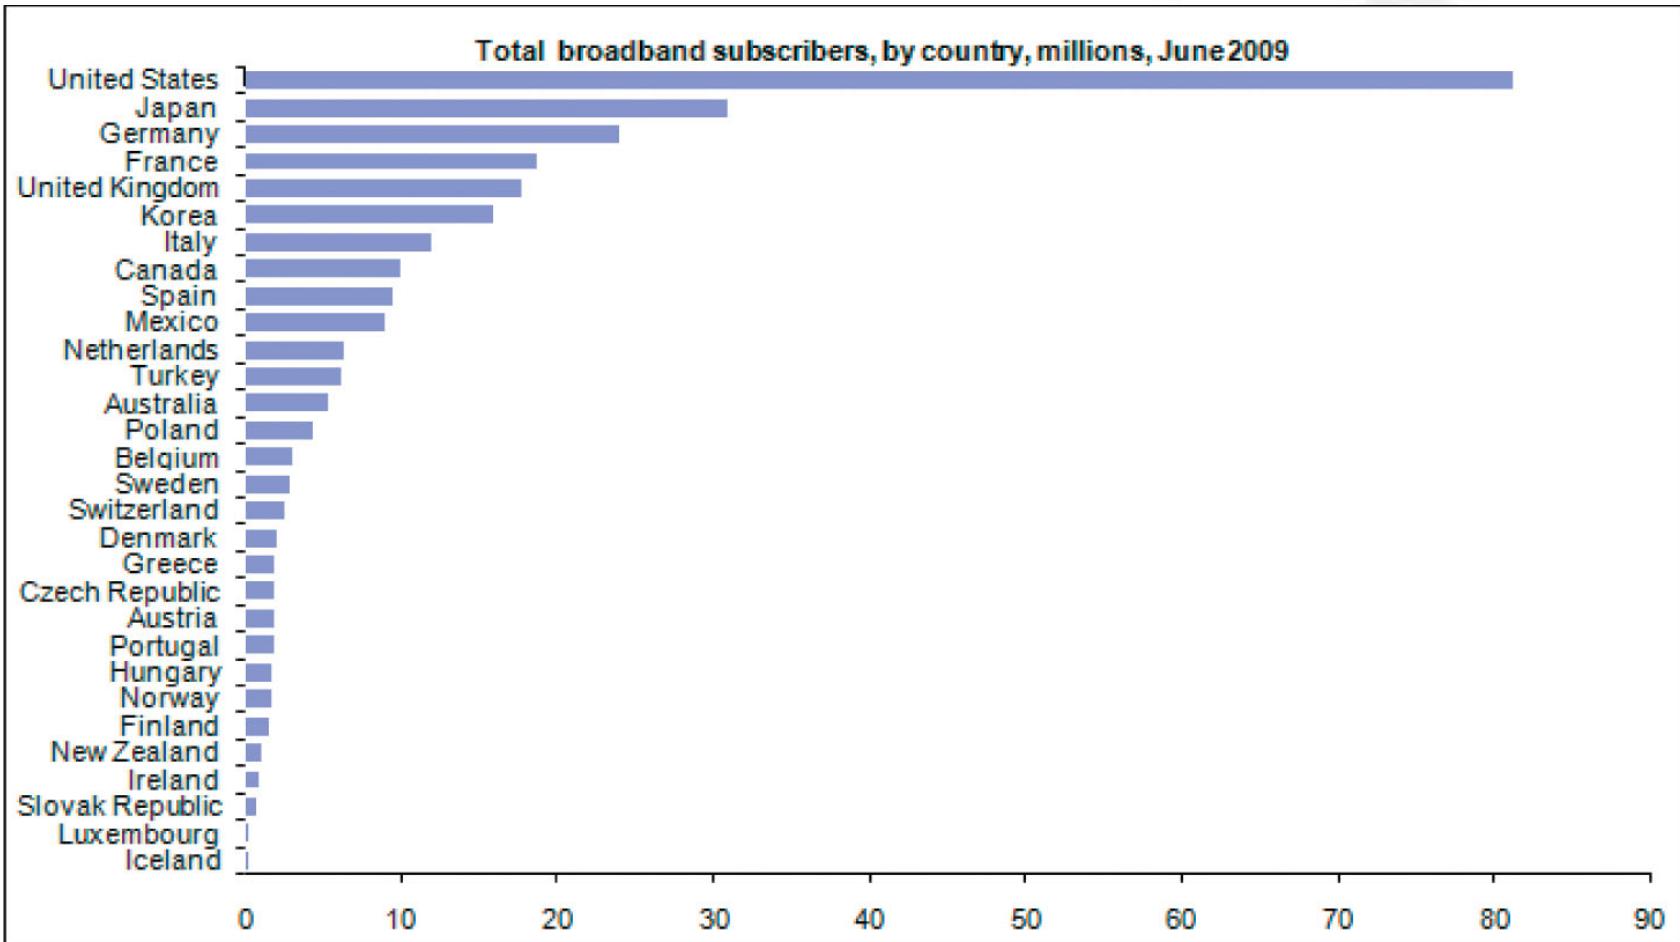

Figure 2-1 Total number of broadband subscribers, by country, millions, June 2009

**College of
Information Technology
and Computer Science**

CENTER OF EXCELLENCE
in Information Technology

Browser Cache and Download Time

- Web pages are stored on computers called Web servers
- Web addresses connect to a specific Web server
- The server serves up the file for download
- All text and images are downloaded
- On return visits, your computer loads the files locally unless content has changed
- Local files are stored in the browser cache
- Take advantage of the cache by reusing graphics

Device and Operating System Issues

- Users' computers vary widely in equipment and design
- This is a design variable you cannot control
- Test your content on as many system types as possible
- Keep the following in mind:
 - Monitors and display software
 - Browser versions
 - Font choices

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Designing for Multiple Screen Resolutions

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Designing for Multiple Screen Resolutions

- Screen resolution is the width and height of the computer screen in pixels
- Most monitors have many screen resolutions to choose from
- This is a variable you cannot control
- The current most common resolutions are 1024 x 768 and 1280 x 1024
- Wide-screen resolutions such as 1366 x 768 and 1200 x 800 are popular as well

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Resolution (pixels)	Percentage of Users (%)
1024 × 768	26.76
1280 × 800	19.98
1280 × 1024	10.46
1440 × 900	8.81
1680 × 1050	5.53
1366 × 768	4.69
Other	22.36

Table 2-1 Popularity of Screen Resolutions

**College of
Information Technology
and Computer Science**

CENTER OF EXCELLENCE
in Information Technology

Wide-Screen Displays

- The new wide-screen monitors have changed the page design
- Fixed layouts have become more popular
- Flexible layouts have to account for expanded horizontal layout space

Handheld Devices

- Many users now have handheld devices for Web browsing
- Must test on these devices as well
- Designing for handheld devices has many challenges
- Many Web sites now offer content designed for handhelds
- CSS Media Queries let you specify style rules for different device types

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Flexible Page Layouts

- Adapt to different screen resolutions
- Work especially well for text-based content
- Can pose a variety of design challenges
- The design must account for the movement of elements on the screen at different resolutions
- At high resolutions, your content can break apart

Width of columns
at 1024 x 768 resolution

The screenshot shows the Wikipedia homepage within a Mozilla Firefox window. The browser interface includes a menu bar (File, Edit, View, History, Bookmarks, Tools, Help), a toolbar with icons for back, forward, search, and refresh, and a address bar showing the URL http://en.wikipedia.org/wiki/Main_Page. The main content area features the classic Wikipedia globe logo and the text "Wikipedia, The Free Encyclopedia". On the left, there's a sidebar with links for navigation, search, and interaction. The central content area has a green header "Today's featured article" followed by an image of the moon Callisto and its descriptive text. To the right, there are several columns of links for Arts, History, Society, etc., and news snippets. The overall layout is designed to be flexible and fit the 1024x768 resolution.

Figure 2-6 Using flexible design, content fills window at 1024 × 768 resolution

Columns expand, text wraps to fit

The screenshot shows a Wikipedia page in Windows Internet Explorer at a resolution of 1366x768. The layout is designed to be flexible, allowing columns to expand and wrap text as needed. Key features include:

- Main Column:** Displays the "Welcome to Wikipedia" banner, site statistics (3,212,242 articles in English), and a "Today's featured article" section about the Kinzua Bridge.
- Left Sidebar:** Contains links for navigation (Main page, Contents, Featured content, Current events, Random article), search (Search button), interaction (About Wikipedia, Community portal, Recent changes, Contact Wikipedia, Donate to Wikipedia, Help), toolbox (What links here, Related changes, Upload file, Special pages, Printable version, Permanent link), and languages.
- Right Sidebar:** Includes links for Arts, History, Society, Biography, Mathematics, Technology, Geography, Science, and All portals, as well as links for Contents, Categories, Featured content, and A-Z index.
- Bottom Navigation:** Provides links for Archive, Email, and More featured articles, as well as Did you know... and On this day... sections.
- Footer:** Shows the URL http://en.wikipedia.org/wiki/New_Years_Day_Battle_of_1968 and browser status (Internet | Protected Mode: Off, 100% zoom).

Fixed-Width Page Layouts

- Allows Web pages to be designed like print pages
- Have consistent width and height
- Designed to center in the browser window regardless of screen resolution
- Easier to design than flexible layouts

Figure 2-13 Fixed-width design at 1366 × 768 resolution

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Suggestions for Solving the Screen Resolution Dilemma

- Flexible designs:
 - User controls the view of the content
 - Less chance of horizontal scrolling
 - More flexibility for multiple devices
 - Better suited to text-based layouts and simpler designs
- Fixed-width designs:
 - Designer controls the view of the content
 - Allow more complex page layouts
 - More control over text length

Crafting the Look and Feel of the Site

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

Balance Design and Content

- Access to your content and user needs should guide your design
- Many sites have unnecessary design elements
- These factors can distract the user
- A Web site's design should complement the content and support the reader
- Always choose simple and direct designs that showcase content and allow easy access

Plan for Easy Access to Your Information

- Information design is the most important factor in the success of your site
- Determines how users access content
- Organize your content
- Presented as a navigable set of information
- Provide navigation choices to the user
- Users may browse or look for specific information
- Anticipate and plan for user actions
- Provide direct links to your most popular pages

Plan for Easy Presentation of Your Information

- Design information to be easy to read and legible
- Break text into reasonable segments
- Provide contrasting colors that are easy on the eye
- Use plenty of white space
- Readers have different online reading habits
- Include plenty of headings
- Control the width of your text

College of
Information Technology
and Computer Science

CENTER OF EXCELLENCE
in Information Technology

The screenshot shows a web browser displaying the Let's Go Travel Guides website. The page features a header with a 'CELEBRATING 50 YEARS' banner and a 'LET'S GO' logo. Below the header is a navigation menu with links to 'HOME', 'DESTINATIONS ▾', 'STORIES' (which is highlighted in red), 'VIDEOS', 'PHOTOS', 'HOTELS', 'DEALS', 'BOOKS', and '50TH B'DAY'. A search bar is located at the top right. The main content area displays an article titled 'Tales From The Crypt' by Let's Go Editors in Hungary (Magyarország) on Nov 23, 2009. The article discusses the Echo Hill legend near Lake Balaton. To the right of the article is a sidebar with a 'Tell us what you think of our new design!' box, a 'Get Our Newsletter!' box, and a 'EscapeWizard' sidebar for airline price comparisons. Callout boxes highlight several design elements:

- Search tool**: Points to the search bar at the top right.
- Consistent navigation menu shows current location**: Points to the 'STORIES' link in the navigation menu.
- Legible, easy-to-read article content**: Points to the text of the article.
- Organized, hierarchical navigation links**: Points to the navigation menu at the top.

Creating a Unified Site Design

- Plan the unifying themes and structure for your site
- Communicate a visual theme with your design choices
- Consider more than each page
- Plan smooth transitions
- Use a grid to provide visual structure
- Include active white space

Plan Smooth Transitions

- Plan to create a unified look
- Reinforce identifying elements
- Consistency and repetition create smooth transitions
- Place navigation elements in the same position on each page
- Use the same navigation graphics throughout the site

Have you visited our amazing flamingos? These birds' most noticeable features are probably their long, skinny legs—which are longer in relation to body size than any other bird. They often stand on just one leg, even while sleeping, with the other tucked up close to their body. Besides being comfortable for the animal, this posture helps reduce heat loss through the legs and feet.

[Home](#) > Animals & Plants

Animals & Plants

Birds

Birds are the only vertebrates that have feathers. All birds are warm-blooded, and they lay eggs. Adaptations such as hollow bones enable most birds to fly, although there are flightless birds, including the ostrich. There are approximately 9,000 bird species in the world. [Click here to find out about birds at the Los Angeles Zoo.](#)

Mammals

Mammals are warm-blooded vertebrates (animals with backbones) that nourish their young with milk. All mammals have hair at some stage of their life. Mammals have larger, more highly developed brains than other animals. There are more than 4,000 mammal species on earth. [Click here to find out about mammals at the Los Angeles Zoo.](#)

Reptiles

Reptiles are cold-blooded, usually egg-laying vertebrates (animals with backbones). Their skin is covered with scales or plates. Unlike mammal young, which are dependent upon their mothers for some time after birth, most reptiles are independent from day one. There are more than 6,500 reptile species. [Click here to find out about reptiles at the Los Angeles Zoo.](#)

Invertebrates

Invertebrates are the most abundant creatures on the planet — comprising more than 97% of all known animal species. By definition, an invertebrate is an animal without a backbone. That includes jellyfish, sponges, worms, snails, bees, lobsters, and spiders. [Click here to find out about invertebrates at the Los Angeles Zoo.](#)

Amphibians

Amphibians can live both in fresh water and on land, although all amphibian species depend upon water for reproduction and to keep their skin moist. They range in size from frogs less than a half-inch long, to a giant salamanders that reach five feet in length. [Click here to find out about amphibians at the Los Angeles Zoo.](#)

Botanical Gardens

Our Botanical Gardens boast an incredible array of plants from all over the globe—from Hong Kong orchid trees to Mexican fan palms. For many visitors, our plant life is as much of an attraction as our wildlife. [Click here to learn more about the botanical collection.](#)

Figure 2-17 Los Angeles Zoo Web site secondary page

Use a Grid to Provide Visual Structure

- The structure of a Web page is imposed by the grid
- The grid is a conceptual layout device
- The grid aligns your content into columns and rows
- Impose a grid to provide visual consistency
- You can break out of the grid to provide variety and highlight information
- The grid provides page margins and gutters between elements

Proposed Set Of Academic Standards Unveiled

March 10, 2010

text size A A A

A group of governors and school superintendents released a proposed set of academic standards Wednesday that lays out what students should be learning in math and English every year from kindergarten through high school.

The plan is part of a push to iron out the jumble of state standards and raise expectations for American schools. Forty-eight states and the District of Columbia joined in the effort to develop national standards, leaving Alaska and Texas as the lone holdouts.

If proponents have their way, third-graders across the country will understand the function of adjectives and adverbs, while eighth-graders will be introduced to the Pythagorean theorem. More broadly, the standards are meant to prepare kids for the possibility of college.

The proposal, backed by President Obama, was unveiled by the National Governors Association and the Council of Chief State School Officers. It emerged with surprisingly broad agreement after years of bitter debate between the federal government and the states over who should set academic standards.

Chris Minnich, director of standards and assessment for the Council of Chief State School Officers, told The Associated Press that the process of coming up with the new standards put a premium on consensus-building.

But some education experts have criticized the process, saying adoption of the new standards will not be voluntary.

"First they tried to tie it to Race to the Top money ... now they're trying to tie it to Title I funds," said Robert Scott, Texas' commissioner of education.

Keep a Flat Hierarchy

- Do not make users navigate through too many layers of information
- Includes section on topic-level navigation pages
- Create content sections organized logically by theme
- Follow the three clicks rule
- Use consistent navigation
- Consider providing a site map

Use Hypertext Linking Effectively

- You determine where users can go on your Web site
- Let users move from page to page or section to section as they please
- Use contextual linking
- Avoid the use of “click here”
- Provide plenty of navigation options

How Much Content Is Too Much?

- Don't overcrowd your pages with information
- Be conscious of the cognitive load of the user
- Carefully divide content into smaller sections
- Present content in a structured manner
- Provide plenty of navigation cues

Reformat Content for Online Presentation

- Cannot post print documents directly online
- Text length, font, and content length do not transfer well
- Re-design paper content for online display

Designing for Accessibility

- Your audience includes users who have physical challenges
- Design your pages to be accessible to users with disabilities or technological barriers
- Common accessibility features can be unobtrusive additions to your site
- Developing accessible content naturally leads to creating good design
- Follow W3 Accessibility Initiative guidelines at www.w3.org/WAI/

Designing for Accessibility

- Perceivable — Information and user interface components must be perceivable by users
- Operable — User interface components must be operable by users
- Understandable — Information about the user interface and its operation must be understandable by users
- Robust — Content must be robust enough to be interpreted reliably by a wide variety of user agents, including assistive technologies
